1 Overview

Atea is an AWS Consulting and Professional services provider that specializes in Cloud, platform engineering, DevOps/DevSecOps Services. We help businesses of all scales to adapt, implement and embrace platform practices through packaged solution offerings and training. We bring in world-class competency through certified architects, FinOps specialists and cloud technicians to create building blocks that form the foundation of every AWS implementation. This is achieved by leveraging AWS best practices, following Nordic/ EU security and compliance regulations and specific industry needs. We work on specialised workloads on-demand like High Performance Computing (HPC), Research Engineering Studio (RES) etc.

In addition, as a leading provider of IT infrastructure solutions, we have experience in helping customers leverage AWS to meet their business needs. By offering both architectural development and consultancy services, we ensure that customers can maximize the benefits of AWS while minimizing potential challenges.

2 Architectural Development

Designing Scalable Platforms: Atea's architects can help design and implement scalable, resilient AWS platform architectures tailored to the specific needs of the customer. This includes selecting the right AWS services, leveraging Infrastructure as Code (IaC), ensuring high availability, and optimizing for performance.

Migration Strategies: Atea can assist in planning and executing migration strategies to move existing workloads to AWS. This involves assessing the current infrastructure, identifying dependencies, and creating a detailed migration plan.

Security and Compliance: Ensuring that AWS environments are secure and compliant with industry standards is crucial. Atea's architects can implement best practices for security, including identity and access management, encryption, and monitoring.

DevOps Integration: Atea's architects can help integrate DevOps practices into AWS environments. This includes automating deployment processes, implementing continuous integration and continuous delivery (CI/CD) pipelines, and ensuring that Infrastructure as Code (IaC) is used to manage resources efficiently. By adopting DevOps, customers can achieve faster delivery cycles, improved collaboration, and enhanced operational efficiency.

3 Consultancy Services

Cloud Strategy Development: Atea's consultants can work with customers to develop a comprehensive cloud strategy that aligns with their business goals. This includes identifying key objectives, assessing readiness, and creating a roadmap for cloud adoption.

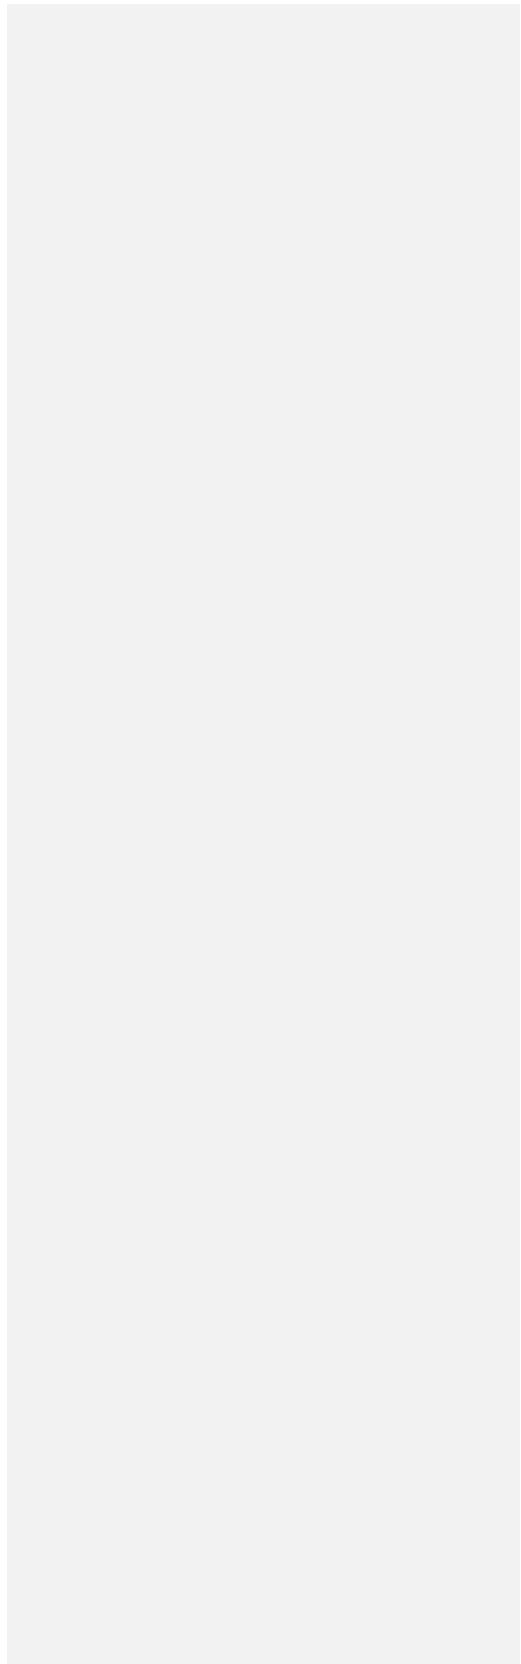

Cloud Assessment: Atea's consultants can conduct thorough cloud assessments to evaluate the current state of a customer's AWS environment. This includes using the AWS Well Architected Framework to ensure best practices are followed and performing Well Architected Reviews to identify areas for improvement. The assessment covers aspects such as operational excellence, security, reliability, performance efficiency, and cost optimization. By conducting these assessments, Atea helps customers achieve a robust and efficient cloud infrastructure.

Cost Optimization: AWS offers a variety of pricing models and services that can be optimized to reduce costs. Atea's FinOps consultants can analyze usage patterns and recommend strategies to optimize spending, such as using reserved instances or implementing cost management tools.

Atea AWS Capabilities

Training and Support: Atea provides training and ongoing support to ensure that customers can effectively manage their AWS environments. This includes hands-on workshops, documentation, and access to expert advice.
